Medical Staff Credentialing and Healthcare Reform
Minimizing Liability Arising from Negligent Credentialing and Physician Lawsuits

A Live 90-Minute Teleconference/Webinar with Interactive Q&A

Today's panel features:
Michael R. Callahan, Partner, Katten Muchin Rosenman, Chicago
Adrienne E. Marting, Member, Epstein Becker & Green, Atlanta
Mark A. Kadzielski, Partner, Fulbright & Jaworski, Los Angeles

Thursday, August 26, 2010
The conference begins at:
1 pm Eastern
12 pm Central
11 am Mountain
10 am Pacific

You can access the audio portion of the conference on the telephone or by using your computer's speakers. Please refer to the dial in/ log in instructions emailed to registrants.
For CLE purposes, please let us know how many people are listening at your location by

• closing the notification box
• and typing in the chat box your company name and the number of attendees.
• Then click the blue icon beside the box to send.

For live event only.
• If you are listening via your computer speakers, please note that the quality of your sound will vary depending on the speed and quality of your internet connection.

• If the sound quality is not satisfactory and you are listening via your computer speakers, please dial **1-866-869-6667** and enter your PIN when prompted. Otherwise, please send us a chat or e-mail sound@straffordpub.com immediately so we can address the problem.

• If you dialed in and have any difficulties during the call, press *0 for assistance.
Medical Staff Credentialing and Healthcare Reform
Minimizing Liability for Negligent Credentialing and Physician Lawsuits

Goals of Program

- Environmental overview of industry developments and Health Care Reform Initiatives
- Review of Doctrine of Corporate Negligence
- What must a plaintiff establish in order to succeed in a negligent credentialing case
- Review of recent negligent credentialing cases and their impact on a hospital’s duty to protect patients
- Impact of The Joint Commission Standards on hospital’s duty
- How to successfully defend against these actions
Goals of Program (cont’d)

• The importance of establishing and uniformly applying credentialing criteria as well as documenting grounds for exceptions to minimize negligent credentialing claims

• What impact does your state’s peer review confidentiality statute or participation in a Patient Safety Organization have on the hospital’s ability to defend against these lawsuits

• How to maximize your peer review protections as applied to physician profiling, P4P and quality outcome information
Environmental Overview

• Plaintiffs are looking for as many deep pockets as possible in a malpractice action
  – Hospital has the deepest pockets
• Tort reform efforts to place limitations or “caps” on compensatory and punitive damages has increased efforts to add hospitals as a defendant
• Different Theories of Liability are utilized
  – Respondent Superior
    ➢ Find an employee who was negligent
  – Apparent Agency
    ➢ Hospital-based physician, i.e., anesthesiologist, was thought to be a hospital employee and therefore hospital is responsible for physician’s negligence
Environmental Overview (cont’d)

– Doctrine of Corporate Negligence
  ➢ Hospital issued clinical privileges to an unqualified practitioner who provided negligent care

• Emphasis on Pay for Performance (“P4P”) and expected or required quality outcomes as determined by public and private payors

• Greater transparency to general public via hospital rankings, published costs and outcomes, accreditation status, state profiling of physicians, etc.

• Denial of reimbursement by government for “never events”, i.e., operated on wrong patient or wrong surgical site, and for hospital acquired conditions.
Environmental Overview (cont’d)

• Hospital profiling of physician performance resulting in periodic reports on comparative utilization and quality outcomes.

• The Patient Protection and Affordable Care Act clearly conditions actual participation and level of reimbursement or penalties on hospital and physician achievement of quality outcomes and adherence to specific protocols.

• Government also has stated its intention to contract with Accountable Care Organizations, i.e. clinically and structurally integrated providers, that will be obligated to manage all levels of care to Medicare patients. ACOs will need to track quality as one component of achieving a share of savings.
Environmental Overview (cont’d)

- Required focus on evidenced-based guidelines and standards and the six Joint Commission competencies (patient care, medical knowledge, practice based learning and improvement, interpersonal and communication skills, professionalism and systems based practice) and ongoing and focused professional practice evaluation (“OPPE” and “FPPE”) as a basis of determining who is currently competent to exercise requested clinical privileges.

- The effect of all of these industry and regulatory demands and expectations regarding quality is to require much greater scrutiny on how physicians are credentialed in order to determine current and continuing competency to exercise all of the clinical privileges given by the hospital.
The Tort of Negligence

- Plaintiff must be able to establish:
  - Existence of duty owed to the patient
  - That the duty was breached
  - That the breach caused the patient’s injury
  - The injury resulted in compensable damages
Duty - Doctrine of Corporate Negligence

- Hospital, along with its medical staff, is required to exercise reasonable care to make sure that physicians applying to the medical staff or seeking reappointment are currently and continuously competent and qualified to exercise the requested clinical privileges. If the hospital knew or should have known that a physician is not qualified and the physician injures a patient through an act of negligence, the hospital can be found separately liable for the negligent credentialing of this physician.

- Doctrine also applies to managed care organizations such as PHOs and IPAs.
Duty - Doctrine of Corporate Negligence (cont’d)

- Restatement of this Doctrine and duty is found in:
  - Case law, i.e., Darling v. Charleston Community Hospital
  - State hospital licensing standards
  - Accreditation standards, i.e., Joint Commission and Healthcare Facilities Accreditation Program, NAMSS
  - Medical staff bylaws, rules and regulations, department and hospital policies, corporate bylaws and policies
Duty - Doctrine of Corporate Negligence (cont’d)

- Practice parameters, protocols and standards created by professional associations such as AMA, ACOG and ACR
- Will P4P and CMS quality and reimbursement criteria be treated as a standard of care?
Duty - Doctrine of Corporate Negligence (cont’d)

- Some questions associated with this duty:
  - How are core privileges determined?
  - Based on what criteria does hospital grant more specialized privileges?
  - Are hospital practices and standards consistent with those of peer hospitals?
  - Were any exceptions to criteria made and, if so, on what basis?
Duty - Doctrine of Corporate Negligence (cont’d)

- Were physicians to whom the exemption applied “grandfathered” and, if so, why?
- Did you really scrutinize the privilege card of Dr. Callahan who is up for reappointment but has not actively practiced at the Hospital for the last six years?
- Has each of your department’s adopted criteria which they are measuring as part of FPPE or OPPE obligations such as length of stay patterns or morbidity and mortality data?
- Has any trade association or other “standard” been incorporated into the hospital’s credentialing/privileging/performance improvement policies?
Breach of Duty

• The hospital breached its duty because:
  – It failed to adopt or follow state licensing requirements
  – It failed to adopt or follow accreditation standards, i.e., FPPE and OPPE
  – It failed to adopt or follow its medical staff bylaws, rules and regulations, policies, core privileging criteria, etc.
  – It reappointed physicians without taking into account their accumulated quality or performance improvement data
Breach of Duty (cont’d)

- It reappointed physicians even though they have not performed any procedures at hospital over the past two years and/or never produced adequate documentation that the procedures were performed successfully elsewhere.
- It failed to require physicians to establish that they obtained additional or continuing medical education consistent with requirement to exercise specialized procedures.
Breach of Duty (cont’d)

- It appointed/reappointed physician without any restrictions even though they had a history of malpractice settlements/judgments, disciplinary actions, insurance gaps, licensure problems, pattern of substandard care which has not improved despite medical staff intervention, current history or evidence of impairment, etc.

- It failed to grandfather or provide written explanation as to why physician, who did not meet or satisfy credentialing criteria, was otherwise given certain clinical privileges

- It required physician to take ED call even though he clearly was not qualified to exercise certain privileges

- Violated clinical pathways, i.e., ACOG, ACR standards
Causation

- The hospital’s breach of its duty caused the patient’s injury because:
  - If the hospital had uniformly applied its credentialing criteria, physician would not have received the privileges which he/she negligently exercised and which directly caused the patient’s injury.
  - History of malpractice suits since last reappointment should have forced hospital to further investigate and to consider or impose some form of remedial or corrective action, including reduction or termination of privileges, and such failure led to patient’s injury.
  - Hospital failed to incorporate updated industry standards of care into its policies which would have led to reduction/denial of privileges.
Causation (cont’d)

– Hospital failed to take appropriate corrective/remedial action despite pattern of adverse outcomes

• Causation is probably the most difficult element for a plaintiff to prove because plaintiff eventually has to establish that if hospital had met its duty, physician would not have been given the privileges that led to the patient’s injury

• Plaintiff must generally prove that the physician was negligent. If physician was not negligent, then hospital cannot be found negligent

• But see Anderson v. Loyola Medical Center (first reported case to hold hospital’s “institutionally negligent” without a finding of physician negligence)
Examples of Negligent Credentialing Cases

• **Darling v. Charleston Community Memorial Hospital** (1965)
  - First case in the country to apply the Doctrine of Corporate Negligence
  - Case involved a teenage athlete who had a broken leg with complications and was treated by a family practitioner
  - Leg was not set properly and patient suffered permanent injury
  - Hospital claimed no responsibility over the patient care provided by its staff physician
Examples of Negligent Credentialing Cases (cont’d)

- Court rejected this position as well as the charitable immunity protections previously provided to hospitals
- Part of the basis for the decision was the fact that hospital was accredited by the Joint Commission and had incorporated the Commission’s credentialing standards into its corporate and medical staff bylaws
Examples of Negligent Credentialing Cases (cont’d)

- These standards reflected an obligation by the medical staff and hospital to make sure physicians were qualified to exercise the privileges granted to them
- Physician was found to be negligent
- The medical staff and hospital’s decision to give privileges to treat patients with complicated injuries to an unqualified practitioner directly caused the patient’s permanent injuries. Therefore, the hospital was held liable for the damages
Examples of Negligent Credentialing Cases (cont’d)

- Frigo v. Silver Cross Hospital (2007)
  - Frigo involved a lawsuit against a podiatrist and Silver Cross Hospital in Illinois
  - Patient alleged that podiatrist’s negligence in performing a bunionectomy on an ulcerated foot resulted in osteomyelitis and the subsequent amputation of the foot in 1998
Examples of Negligent Credentialing Cases (cont’d)

- The podiatrist was granted Level II surgical privileges to perform these procedures even though he did not have the required additional post-graduate surgical training required in the Bylaws as evidenced by completion of an approved surgical residency program or board eligibility or certification by the American Board of Podiatric Surgery at the time of his initial appointment in 1992.
Examples of Negligent Credentialing Cases (cont’d)

- At the time of his reappointment, the standard was changed to require a completed 12 month podiatric surgical residency training program, successful completion of the written eligibility exam and documentation of having completed 30 Level II operative procedures

- Podiatrist never met these standards and was never grandfathered. In 1998, when the alleged negligence occurred, he had only performed six Level II procedures and none of them at Silver Cross
Examples of Negligent Credentialing Cases (cont’d)

- Frigo argued that because the podiatrist did not meet the required standard, he should have never been given the privileges to perform the surgery.

- She further maintained that the granting of privileges to an unqualified practitioner who was never grandfathered was a violation of the hospital’s duty to make sure that only qualified physicians are to be given surgical privileges. The hospital’s breach of this duty caused her amputation because of podiatrist’s negligence.
Examples of Negligent Credentialing Cases (cont’d)

- Jury reached a verdict of $7,775,668.02 against Silver Cross
- Podiatrist had previously settled for $900,000.00
- Hospital had argued that its criteria did not establish nor was there an industry-wide standard governing the issuance of surgical privileges to podiatrists
- Hospital also maintained that there were no adverse outcomes or complaints that otherwise would have justified non-reappointment in 1998
Examples of Negligent Credentialing Cases (cont’d)

- Court disagreed and held that the jury acted properly because the hospital’s bylaws and the 1992 and 1993 credentialing requirements created an internal standard of care against which the hospital’s decision to grant privileges could be measured.

- Court noted that Dr. Kirchner had not been grandfathered and that there was sufficient evidence to support a finding that the hospital had breached its own standard, and hence, its duty to the patient.

- This finding, coupled with the jury’s determination that Dr. Kirchner’s negligence in treatment and follow up care of Frigo caused the amputation, supported jury’s finding that her injury would not have been caused had the hospital not issued privileges to Dr. Kirchner in violation of its standards.
Examples of Negligent Credentialing Cases (cont’d)

– Court also denied hospital’s attempt to introduce peer review record as evidence of its argument that it met its legal duty based on Illinois Medical Studies Act which makes this record not subject to discovery or admissibility into evidence. There are no exceptions.

– Jury verdict was affirmed. Petition for leave to appeal to Illinois Supreme Court was denied

• See also Larson v. Wasemiller (Minn. Sup. Ct. 2007)
  – For the first time, the Supreme Court of Minnesota recognized that the tort of negligent credentialing “is inherent in and the natural extension of well established common law rights”

• See also – LeBlanc v. Research Belton Hospital (MO. Ct. Appeals, 2008)

• See also Aechuleta v. St. Mark’s Hospital (Utah Sup. Ct. 2010)
Examples of Negligent Credentialing Cases (cont’d)

- Dr. Brauweiler was a family practitioner who applied for and received medical staff privileges at Sandwhich Community Hospital (now Valley West Community Hospital), including obstetrical privileges, in 1991.

- In 1995, he delivered a child by operative vacuum delivery. Delivery was successful but child needed resuscitation. Through no fault of physician, resuscitation was delayed leading to permanent brain damage. Lawsuit was filed in 1997 for alleged negligence against hospital and Dr. Brauweiler.
Examples of Negligent Credentialing Cases (cont’d)

• During deposition, physician testifies that a vacuum extraction would be a deviation of the standard of care if done at +1 station or higher

• Dr. Brauweiler was reappointed each time with OB privileges, including the specific grant of operative vacuum and operative forceps delivery which were separate privileges in 2000. No adverse results in other vacuum delivery cases

• In 2001, he delivered a child by vacuum delivery but this time, vacuum extractor was performed 22 times in 33 minutes because it kept popping off. Infant was presenting at +1 the whole time. OB was called and did a C section
Examples of Negligent Credentialing Cases (cont’d)

Apgars were 2, 3 and 6. Infant diagnosed with hypoxic ischemic encephalopathy. Lawsuit was filed in 2003 against Dr. Brauweiler and amended in 2005 to include the hospital on a negligent credentialing claim

- In 2002, he withdrew his OB privileges
- Plaintiff’s attorney argued that hospital was negligent in granting OB privileges to Dr. Brauweiler in the first place and especially after the 1995 case even though he was not at fault
  - Plaintiff contended that the case should at least have called into question the physician’s qualifications
Examples of Negligent Credentialing Cases (cont’d)

- Hospital decided that it did not want to run the risk of losing at trial and settled case for almost $8 million.
- Defense not able to introduce the peer review record of hospital to establish that it met its duty because they were inadmissible under the Medical Studies Act.
Joint Commission Standards on Focused and Ongoing Performance Monitoring

- Standard 3.10
  - Performance improvement. Medical staff is **actively** involved in measurement, assessment and improvement of the various PI standards
  - Medical Staff is now a provider of oversight for quality of care services and treatment
  - Is responsible for ongoing evaluation of competency and delineation of privileges
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

• Standards MS.4.10 through MS.4.45
  – MS.4.10 through 4.45 have been significantly rewritten
  – The purpose of these Standards is to establish additional evidence-based processes to determine a practitioner’s competency
  – With regard to privileging, the new Standard imposes a higher burden in determining whether the applicant or current medical staff physician has the degree of training, education and experience required to perform each of the requested privileges and procedures
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

- Information about a practitioner’s scope of privileges must be updated as changes in clinical privileges are made.
- Medical staff and governing board must develop criteria that will be considered when deciding to grant, limit or deny requested privileges – ties in with CMS Conditions of Participation and concerns about use of core privileging not related to actual evidence-based privileging.
- If privileging is unrelated to quality of care, treatment and services or professional competence, evidence must exist that impact of resulting decisions on the quality of care, treatment, and services is evaluated.
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

- Emphasis is on three new concepts

  • General Competencies
    - Patient care (compassionate, appropriate, effective)
    - Medical/clinical knowledge (demonstrated knowledge and application of biomedical, clinical and social services)
    - Practice-based learning and improvement (is physician obtaining CMEs) (use of scientific evidence and methods to investigate, evaluate and improve practices)
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

- Interpersonal and communications skills (demonstration of interpersonal and communication skills to establish and maintain professional relationships)
- Professionalism (commitment to continuous professional development, ethical practice, reactivity to diversity and a reasonable attitude)
- Systems-based practice (is physician abiding by all policies, participating in EHR initiatives, modifying behaviors based on profiling data)
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

- Looks for a balance between clinical and professional behavior
  - Focused Professional Practice Evaluation
  - Ongoing Professional Practice Evaluation
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

• MS.4.30 – Focused Professional Practice Evaluation
  – Standard expects the medical staff to identify and implement a method of evaluating practitioners without current performance documentation at the hospital, whether the physician is new or is an existing physician seeking new privileges, including processes where quality of care concerns arise, criteria for extending the evaluation period, and for communicating and acting on the results of the evaluation
  – Need adequate information to confirm competence
  – Core privileging
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

– Effective January 1, 2008, a period of focused professional evaluation is implemented for all initially requested privileges

• A period of focused professional practice evaluation is implemented for all initially requested privileges (EP1)
  – Must develop criteria to evaluate performance of physicians when issues affecting patient safety and quality of care are identified (EP2)
  – Performance monitoring includes:
    ➢ Criteria
    ➢ Method for setting up a monitoring plan
    ➢ Method for identifying duration of the plan
    ➢ Identifying circumstances when an outside review will be sought (EP3)
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

- Evaluation consistently applied (EP4)
- Focused review triggers are defined (EP5)
- Need to focus on the particular issue or privileges in question to make sure physician is currently competent to exercise same. Cannot avoid review simply because physician has no problems with other privileges (EP6)
- Must develop standard and criteria for determining what form of monitoring is to take place (EP7)
- How is resolution of performance defined – results or timing (EP8)
- Resolution standard uniformly applied (EP9)
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

- Would require “performance monitoring” particularly for those new physicians who have yet to establish a track record with the hospital or when questions about competency or ability are raised.

- Methods of focused professional practice evaluation can include, but are not limited to chart review, monitoring, clinical practice patterns, simulation, proctoring, external peer review, and discussion with other individuals involved in patient’s care (Rationale for MS.4.30).

- All accumulated information from focus evaluation process must be integrated into performance improvement activities (Id).
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

• MS.4.40 – Ongoing Professional Practice Evaluation
  – Under the ongoing professional practice evaluation, here is a heightened emphasis on evaluating a physician’s practice so as to identify trends that impact on quality of care and patient safety. Such criteria can include but are not limited to, the following:

  ➢ Review of operative and other clinical procedures performed and their outcomes
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

- Pattern of blood and pharmaceutical usage
- Request for test and procedures
- Length of stay patterns
- Morbidity and mortality data
- Practitioners usage of consultants
- Other relevant criteria
  - Ongoing evaluation must be factored into any decisions to maintain, revise or revoke privileges
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

- Problems identified during ongoing review should trigger a focused review or other intervention. Generally looking for patterns or trends
- “Ongoing” does not mean once a year
- Medical Staff Bylaws must evidence how the staff will evaluate and act upon a report of concerns relating to a practitioner’s clinical practice and/or competence and further, that the concerns are uniformly investigated and addressed
Joint Commission Standards on Focused and Ongoing Performance Monitoring (cont’d)

- Evaluation can be based on different sources of information such as chart reviews, direct observation, monitoring, consultations with other care givers, etc.
- Must have a clearly identified process to facilitate evaluation of each physician (EP1)
- Data to be collected is determined by each department and approved by the organized medical staff (EP2)
- Information from ongoing performance monitoring is used to continue, revoke or limit any or all existing privileges (EP3)
Defending Against a Corporate Negligence Claim

• Existence of duty and breach of duty and causation is usually established through expert testimony
• Expert must establish that duty was not met, i.e., that hospital adopted and followed all standards as reflected in its bylaws and procedures, and/or no breach occurred and/or if there was a breach, it did not cause patient’s injuries
Defending Against a Corporate Negligence Claim (cont’d)

- Courts and juries may be less likely to hold in favor of the plaintiff even if, for example, a physician’s lack of qualifications or history of malpractice actions raises the issue of whether privileges should have been granted, as long as some action was taken, i.e., physician was being monitored or proctored or was under a mandatory consultation.

- A judge and jury will be more likely to find in favor of the plaintiff if the hospital did absolutely nothing with respect to the physician’s privileges.
Defending Against a Corporate Negligence Claim (cont’d)

• It will be important for hospital to establish that there is not necessarily a black and white standard on what qualifications are absolutely required before issuing clinical privileges although such a position, at least for certain privileges, may have been established, i.e., PTCAs

• Also, the hospital should argue that even if a physician was identified as having issues or problems, a reduction or termination of privileges is not always the appropriate response. Instead, the preferred path is for the hospital to work with the physician to get them back on track by implementing other remedial measures such as monitoring, proctoring, additional training, etc. (See Golden Rules of Peer Review at p. 69)

• Attempt to introduce physician’s peer review record to establish that Hospital met it’s duty
Defending Against a Corporate Negligence Claim (cont’d)

- You must evaluate whether your peer review statute does or does not allow introduction of peer review record into evidence for this purpose.

- Denying a plaintiff access to this information usually makes it more difficult to prove up a negligent credentialing claim.

- Most statutes do not permit the discovery or admissibility of this information because to do so would have a chilling effect on necessary open and frank peer review discussion. There is no statutory exception that allows a hospital to pick and choose when I can or cannot introduce information into evidence.
Defending Against a Corporate Negligence Claim (cont’d)

- In Frigo, hospital’s attempt to establish that duty was met by showing, through the peer review record, that podiatrist had no patient complaints or bad outcomes was denied because prohibition on admissibility into evidence was absolute.

- Court stated, however, that this information was somewhat irrelevant because the Hospital clearly did not follow its own standards.
Other Preventative Steps to Consider

• Conduct audit to determine whether hospital and medical staff bylaws, rules and regulations and policies comply with all legal accreditation standards and requirements
• If there are compliance gaps, fix them
• Determine whether you are actually following your own bylaws, policies and procedures

  Remember:  Bylaws, policies and procedures and guidelines are all discoverable. They also create the hospitals internal standard. If you do not follow your bylaws and standards, you arguably are in breach of your patient care duties
• If you are not following your bylaws and policies, either come into compliance or change the policies
• Update bylaws and policies to stay compliant
Other Preventative Steps to Consider (cont’d)

• Confer with your peers. Standard of care can be viewed as national, i.e., the Joint Commission, internal or area-wide so as to include the peer hospitals in your market. If your practices deviate from your peers, this will be held against you as a breach of the standard of care.

• It is very important to understand from your insurance defense counsel how plaintiff’s attempt to prove a corporate negligence violation as well as how these actions are defended.
  – These standards have a direct impact on hospital prophylactic efforts to minimize liability exposure.
Other Preventative Steps to Consider (cont’d)

– What testimony must plaintiff’s expert assert to establish a claim and what must defense expert establish to rebut?

– Every state has its own nuances and you must understand them in order to defend accordingly

• Does your state peer review statute allow for the introduction of confidential peer review information under any circumstances either to support a plaintiff’s claim or to defend against it?

• If the file information would help the hospital, can the privilege be waived in order to defend the case? Realize that plaintiff also would have access. Will this help or hurt you?
Other Preventative Steps to Consider  (cont’d)

– The answers to these questions are important because the hospital may want to create a record of compliance with its duty that is not part of an inadmissible peer review file. This effort must be coordinated with internal and/or external legal counsel.

• Otherwise, take steps for maximizing protections under peer review confidentiality statute.
The Era of Pay for Performance

- Payors and accrediting agencies are placing much greater importance on measuring quality outcomes and utilization
  - Affects bottom line
  - Impacts reimbursement
  - Failure to address substandard patterns of care can increase Hospital’s liability exposure
The Era of Pay for Performance (cont’d)

- Average length of stay of patients at many hospitals exceeds the Medicare mean rather substantially
- Significant dollars are lost due to length of stay and inefficient case management
The Era of Pay for Performance (cont’d)

- Payors, including Medicare and Blue Cross/Blue Shield, are adopting Pay for Performance standards as a way to incentivize providers to meet identified goals and measures so as to increase reimbursement.
- Costs and outcomes are becoming subject to public reporting and being use by private parties:
  - CMS
  - Leapfrog
  - The Joint Commission
  - Unions
The Era of Pay for Performance (cont’d)

- Provider Performance – Creating Standardization among Payors
  - Health plans are providing standardized measurements with potential for bonuses in following areas:
    - Asthma
    - Breast Cancer Screening
    - Diabetes
    - Childhood Obesity
    - IT investment/use
    - Adverse Drug Reaction
The Era of Pay for Performance (cont’d)

- Hospital and Medical Staff leaders must prepare to address the significant increase in utilization, cost and quality data which will be generated through external and internal sources
  - Need to find a way that enhances efficiencies and deals with “outliers” in a constructive manner so as to increase quality
The Era of Pay for Performance (cont’d)

• CMS and certain accrediting bodies are also concerned about whether Medical Staff physicians are truly qualified and competent to exercise all of the clinical privileges granted to them
  – CMS quite critical of how many hospitals grant “core privileges” without determining current competency
  – CMS wants to see criteria developed for each clinical privilege and an evaluation as to whether the physician is qualified to perform each
The Era of Pay for Performance (cont’d)

• How can Hospital and Medical Staff determine a physician’s competency when they do nothing or very little at the Hospital
  – Physicians tend to accumulate privileges
  – Reappointment tends to be a rubber stamp process
### Variance Between Medicare Geo. Mean and Actual ALOS by Top 20 DRG’s at Example Hospital

Example by Major Dx
- Heart Failure
- Card. Arrhythmia
- Percut Cardiovasc w/o AMI
- Angina

This physician’s overall performance is In line w/the peer group
Example by Major Dx

- Heart Failure
- Card. Arrhythmia
- Percut Cardiovasc w/o AMI
- Angina

This physician’s overall performance is significantly worse the peer group.
Value Based Purchasing – An Overview

- Value Based Purchasing (VBP) is a federal P4P program.
- VBP was implemented under § 3001 of PPACA.
- The Secretary of the Department of Health and Human Services (“Secretary”) has been charged with the implementation and oversight of the program.
- The program will link a hospital’s reimbursement to its clinical quality.
Value Based Purchasing - Implementation

- Value Based Purchasing will go into effect in the 2013 fiscal year.
- However, payments will apply to discharges occurring on or after October 1, 2012.
Value Based Purchasing Quality - Guidelines

• During the 2013 fiscal year, hospitals will be judged on 5 conditions and procedures.
• These 5 conditions and procedures include:
  – 1. Acute Myocardial Infarction;
  – 2. Heart Failure;
  – 3. Pneumonia;
  – 4. Surgeries; and
Value Based Purchasing Quality - Guidelines

• Performance standards for these conditions and procedures have not been released yet.
• However, the standards must be released by the Secretary at least 60 days prior to the implementation of the program.
• Additional conditions and procedures will be focused on in subsequent years. The list of conditions and procedures will be determined by the Secretary.
• Hospitals that achieve the highest performance scores will receive the largest value based incentive payments.
Value Based Purchasing – Making Information Public

• As part of the VBP program, the Secretary is required to publish each hospital’s performance data on HHS’s ‘Hospital Compare’ website.
• Information that will be compiled on the site includes:
  – 1. The performance of the hospital with respect to each measure that applies to the hospital;
  – 2. The performance of the hospital with respect to each condition or procedure; and
  – 3. The hospital’s performance score assessing the total performance of the hospital.
Value Based Purchasing – Docs Not Left Out in the Dark

• The Secretary is also charged with implementing a similar program for physicians.

• Under the physician-based program, the Secretary will be charged with developing a modifier that will provide payments to physicians based on the quality of care furnished compared to the cost of the care provided.

• Additional information about this program should be forthcoming from the Secretary, but as of the current date the specifics of the program are unknown.
Peer Review - Illinois

- Illinois Medical Studies Act
  - Purpose: Ensures that members of the medical profession will engage in self-evaluation of their peers to ensure quality care
  - Citation: 735 ILCS 5/8-2101
  - Relevant Provisions:
    - Privileges “all information, interviews, reports, statements, memoranda, recommendations, letters of reference, … [and] other third party confidential assessments,” etc. used in the course of internal quality control, medical study or improving patient care.
    - Note that this protection does not extend to incident reports.
Peer Review - California

• In California, peer review documents are protected under both the state’s Peer Review statute, as well as under the state’s Attorney/Client Privilege.
• Protection is specifically afforded to incident reports.
  – See, Sutter Davis Hosp. v. Superior Court, 2004 Cal. App. Unpub. LEXIS 8196 (2004) (Where the judge held that “because the nurse was following the established procedure for gathering information for the committee’s consideration, the document was a part of a quality of care investigation by the committee.”)
  – See, Scripps Health v. Superior Court, 109 Cal. App. 4th 529 (2003) (Where incident reports were protected from disclosure based upon attorney/client privilege.)
Peer Review – Florida

- Florida does not provide protection to peer review documents under its laws.

- See, Article X, § 25 of the Florida Constitution -
  - “Patients have a right to have access to any records made or received in the course of business by a healthcare facility or provider relating to any adverse medical incident.”
  - ‘Adverse Medical Incident’ is defined as an “incident that is reported to or reviewed by any healthcare facility peer review, risk management, quality assurance, credentials, or similar committee, or any representative of any such committees.”
Peer Review - Georgia

- Georgia privileges not only the proceedings and records of peer review organizations and medical review committees from civil liability, but also provides immunity to participants and witnesses in these proceedings.
- Citation: O.C.G.A. 31-7-143
  - “The documents contained in medical and peer review files are absolutely privileged so long as the information was developed by a peer review committee performing a peer review function.”
Peer Review – New York

- Citation: NY CLS Educ § 6527(3)
- New York requires incident reporting by law.
- To protect these reports, the state has implemented broad peer review protections.
  - Proceedings or records relating to “medical” or “quality assurance review function[s]” and incident reports are privileged from disclosure under the New York Civil Practice Law.
Peer Review– A Reminder

- The protections afforded to peer review documents differ by state and are subject to change.
- Be sure to check your state law, and stay abreast of any changes to the peer review statutes or any relevant case law.
- You must also always be aware of how the courts in your state interpret your state’s peer review statute.
Steps to Maximize Confidentiality Protection Under Peer Review Statute

- It is important for all medical staff leaders and the hospital to know the language and interpretation of your peer review statute.
- As a general rule, courts do not like confidentiality statutes which effectively deny access to information.
- Although appellate courts uphold this privilege, trial courts especially look for ways to potentially limit its application and will strictly interpret the statute.
- The courts have criticized attorneys for simply asserting the confidentiality protections under the Act without attempting to educate the court about what credentiality and peer review is or explaining why the information in question should be treated as confidential under the act.
- One effective means of improving the hospital and medical staffs odds is to adopt a medical staff bylaw provision or policy which defines “peer review” and “peer review committee” in an expansive manner while still consistent with the language of the peer review statute. Examples are set forth below:
Peer Review:

• “Peer Review” refers to any and all activities and conduct which involve efforts to reduce morbidity and mortality, improve patient care or engage in professional discipline. These activities and conduct include, but are not limited to:

  the evaluation of medical care, the making of recommendations regarding the delineation of privileges for Physicians, LIPs or AHPs seeking or holding such clinical privileges at the hospital, addressing the quality of care provided to patients, the evaluation of appointment and reappointment applications and qualifications of Physicians, LIPs or AHPs, the evaluations of complaints, incidents and other similar communications filed against members of the Medical Staff and others granted clinical privileges. They also include the receipt, review, analysis, acting on and issuance of incident reports, quality and utilization review functions, and other functions and activities related thereto or referenced or described in any Peer Review policy, as may be performed by the Medical Staff or the Governing Board directly or on their behalf and by those assisting the Medical Staff and Board in its Peer Review activities and conduct including, without limitation, employees, designees, representatives, agents, attorneys, consultants, investigators, experts, assistants, clerks, staff and any other person or organization who assist in performing Peer review functions, conduct or activities.
Peer Review (Cont’d)

“Peer Review Committee” means a Committee, Section, Division, Department of the Medical Staff or the Governing Board as well as the Medical Staff and the Governing Board as a whole that participates in any Peer Review function, conduct or activity as defined in these Bylaws. Included are those serving as members of the Peer Review committee or their employees, designees, representatives, agents, attorneys, consultants, investigators, experts, assistants, clerks, staff and any other person or organization, whether internal or external, who assist the Peer Review Committee in performing its Peer Review functions, conduct or activities. All reports, studies, analyses, recommendations, and other similar communications which are authorized, requested or reviewed by a Peer Review Committee or persons acting on behalf of a Peer Review Committee shall be treated as strictly confidential and not subject to discovery nor admissible as evidence consistent with those protections afforded under the Medical Studies Act. If a Peer Review Committee deems appropriate, it may seek assistance from other Peer Review Committees or other committees or individuals inside or outside the Medical Center. As an example, a Peer review Committee shall include, without limitation: the MEC, all clinical Departments and Divisions, the Credentials Committee, the Performance Improvement/Risk Management Committee, Infection Control Committee, the Physician’s Assistance Committee, the Governing Board and all other Committees when performing Peer Review functions, conduct or activities.
Peer Review (Cont’d)

Another concept to keep in mind is that appellate courts have held that information which is normally generated within the hospital or medical staff which is not clearly treated as a “peer review document” cannot be kept confidential by simply submitting it to a Peer Review Committee for review and action. Therefore, the hospital and medical staff should consider identifying those kinds of reports, such as incident reports, quality assurance reports, etc., as being requested by or authorized by a qualified Peer Review Committee.

• Unilateral vs. committee action should be avoided
• Self-serving language such as “privileged and confidential under the peer review statute: document cannot be admissible or subject to discovery” should be placed at the top or bottom of Peer Review materials
• If there is a challenge as to whether the statute applies to Peer Review documents, hospital and medical staff should prepare appropriate affidavits, or other testimonials which effectively educate the court as to why these materials should be considered confidential and therefore, protected under the statute
• If a physician or plaintiff cannot admit Peer Review Information into evidence, it can effectively foreclose one or more causes of action because the physician will not be able to introduce proof to substantiate the claim, i.e., an alleged defamatory statement made during a Peer Review proceeding.
Additional Steps to Ensure that Data Collected and Reports Prepared are Treated as Confidential

• Goal is to maximize efforts to keep performance monitoring, quality and utilization data and reports and peer review records as privileged and confidential from discovery in litigation proceedings.

• To determine whether or not a document will be covered under peer review, the facility must first review any relevant reports, studies, forms, and analyses, which are utilized by the hospital and medical staff.
Additional Steps to Ensure that Data Collected and Reports Prepared are Treated as Confidential (cont’d)

- Review all relevant reports, studies, forms, reports, analyses, etc., which are utilized by the hospital and medical staff

  - Profiling data and reports
  - Comparative data
  - Utilization studies
  - Outcomes standards and comparisons by physicians
  - Incident reports
  - Quality assurance reports
Additional Steps to Ensure that Data Collected and Reports Prepared are Treated as Confidential (cont’d)

• Patient complaints
• Cost per patient visit, ALOS, number of refunds and consultants used, etc.
  – Identify which reports and info, if discoverable, could lead to hospital/physician liability for professional malpractice/corporate negligence
  – Identify all applicable state and federal confidentiality statutes and relevant case law
• Medical Records
• Business records
• Records, reports prepared in anticipation of litigation
Additional Steps to Ensure that Data Collected and Reports Prepared are Treated as Confidential (cont’d)

- Identify scope of protections afforded by the following statutes, and determine the steps needed to maintain confidentiality. Applicable statutes include:
  - Peer review confidentiality statutes
  - Physician-Patient confidentiality statutes
  - Attorney-Client communication statutes
  - HIPAA
  - Drug, alcohol, mental health statutes
- Can steps be taken to improve or maximize protection?
Additional Steps to Ensure that Data Collected and Reports Prepared are Treated as Confidential (cont’d)

• What documents are left and how sensitive is the information in the reports?
• If sensitive information remains, can it be moved to or consolidated with a confidential report?
• Can information be de-identified or aggregated while not minimizing its effectiveness?
• Adopt self-serving policies, bylaws, etc, which identify these materials as confidential documents — need to be realistic. A document is not confidential because you say it is. See attached definitions of “Peer Review” and “Peer Review Committee”
Additional Steps to Ensure that Data Collected and Reports Prepared are Treated as Confidential (cont’d)

– Need to consult with your legal counsel before finalizing your plan
– Plan needs to be updated as forms and law changes
Golden Rules of Peer Review

• Physicians need to be able to say “I made a mistake” without fear of retribution or disciplinary action.
• Everyone deserves a second or third chance.
• Medical staffs and hospitals should strive to create an intra-professional versus adversarial environment.
• Steps should be taken to de-legalize process.
• Develop alternative remedial options and use them.
• Comply with bylaws, rules and regulations and quality improvement policies.
Golden Rules of Peer Review (cont’d)

• Apply standards uniformly.
• Take steps to maximize confidentiality and immunity protections.
• Know what actions do and do not trigger a Data Bank report and use this knowledge effectively.
• Be fair and reasonable while keeping in mind the requirement to protect patient care.
• Determine whether physician may be impaired.
Other Forms of Remedial Action

- Mandatory consultations which do not require prior approval
- Proctoring
- Monitoring
- Retraining/Re-education
- Voluntary relinquishment of clinical privileges at the time of reappointment
- Administrative suspensions, i.e., medical records
- Retrospective or concurrent audits
Other Forms of Remedial Action
(cont’d)

• Reduction in staff category
• Removal from ER call duty
• Probations
• Reprimand
• Conditional Reappointments
• Physician’s Assistance Committee
